OUR FAMILY BUSINESS IS YOUR FAMILY HOME

From repairing an aged roof to restoring a home shattered by a storm, ECG has performed an average of 800 projects a year. You'll get to know your ECG project manager and our team members as we work together to cover every aspect of your construction. We will deliver the structural integrity, safety, attractiveness and comfort you expect. ECG specializes in insurance damage restoration and has strong relationships with top insurance carriers. If a claim is filed, ECG promises to partner with you throughout the entire build-back process.

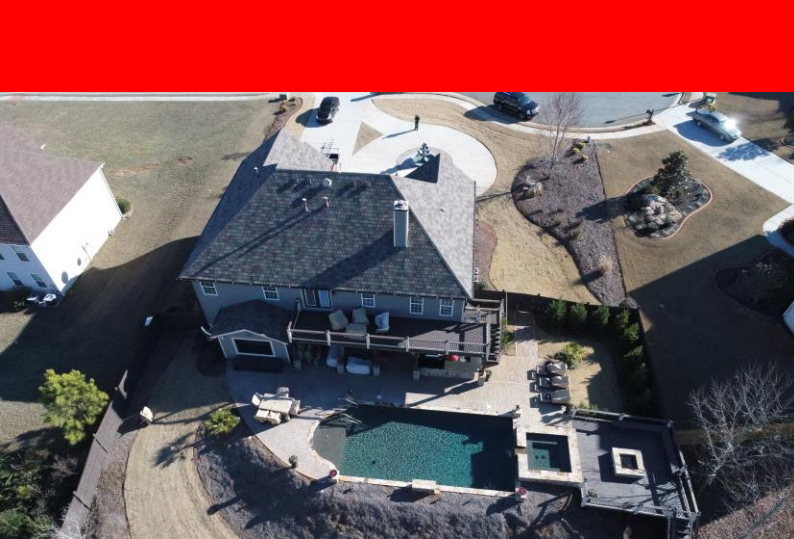

A RENOVATION & RESTORATION COMPANY

ROOFING

Roofing Repairs and Replacement, typically completed in one day! ECG recommends asphalt shingles as the most cost-effective way to protect a Georgia home. We offer steel, slate, cedar shake and stone-coated steel roofing too.

Great Siding Selections and Types, with the best industry warranties. ECG cares for every detail of installment, offering James Hardie Cement Board for any project size.

SIDING

Aluminum is the Most Popular... Gutters and downspouts are integral for the functionality of your exterior system. A healthy system preserves your topsoil and protects siding & trim from back splash water that can damage paint and cause wood rot.

Create Your Beautiful View of Georgia while Maximizing Energy Efficiencies... With the extreme hot humid summers and frigid cold winters of Georgia, it's important to install only durable high quality windows and doors in your home. We offer brand name selections with warranties ranging from two decades to lifetime guarantees, which can transfer from owner to owner. We install properly so you can increase your energy efficiency and lower your utility bills. Combining proper attic insulation and ventilation with sealing of all air leaks can lead to an 18% savings on heating and cooling bills.

- Daily Work-Site Clean-up
- ECG's Services Completed Efficiently on Schedule

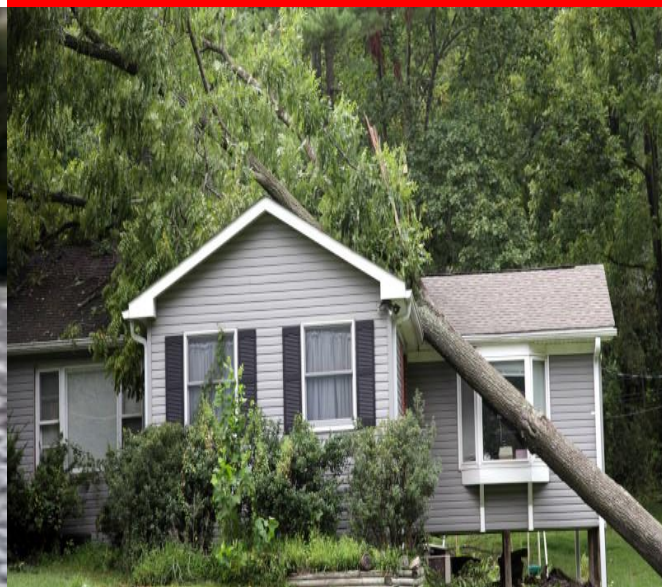

CUSTOMER

REVIEWS

★★★★★ 4.6

"I called Excellence Contractors on a Saturday and by Wednesday next week they had already installed my new roof. Fast service, accurate and competitive pricing, outstanding communication. I would definitely recommend to anyone looking to get a new roof installed"

"First class service from beginning to end. We had several roofing companies coming over to give us an estimate. The reason we choose Excellence Contractor Group was because of their service and professionalism. They took the time to explain the process and timelines involved for our project. The day of the job, Daniel was at the job site at 6am. Preparing everything. They move all of our patio furniture and placed everything back after project was completed. Everything was very clean and placed on it original place, it was hard to noticed that we just had our roof replaced. We are very satisfied and happy"

#1 QUALIFIED **SEAM METAL ROOF** SYSTEM

DURABLE LONG-LASTING **ROOFING**

TPO and PVC Roof Systems

Thermoplastic Polyolefin (TPO) and Poly Vinyl Chloride (PVC) are thermoplastic roof systems that are both white and highly reflective roof membranes. However, they are different; TPO is the fastest growing product in commercial flat roofing due to its similar properties as PVC and its lower cost.

ECG TPO and PVC DIFFERENCE

Excellence Contractors are your local experts for all your commercial roofing installation and repair needs, including TPO and PVC roofing services. We have the knowledge and workmanship to maximize the energy efficiency of your commercial building and save you money on your energy bills.
